- RADPM.2.3

User Groups

System Administrators

Smarter Balanced /Program Management

Program Management/Add a Tenant

Script 11.0 Add a Tenant- Validations

Setup

Program Management is operational and MongoDB is connected

QA staff has either a Local or Cloud environment deployed for testing to interact with UI.

QA Staff must also have a REST Client available to perform tests with verb GET, POST, PUT or DELETE

QA staff must test the script on Internet Explorer 8+ (Windows), Firefox 8+ (Macintosh, Linux & Windows), Safari 5+ (Macintosh), Chrome 16+ (Macintosh, Linux & Windows)"

Teardown

- None

Script Steps

Step #	Test Action	Expected Results
1	Access PMI (http://localhost:8080/pmi) and click the "Manage Tenant" button for creating a new configuration	Interface should open and should have an option to create a new configuration
2	Repeat Step 1 on Chrome, Firefox, IE, Safari browser	Interface should open up and it should be similar across all browsers
3	Click "New" button to add a new tenant	Corresponding PMI page should open. UI should have option to name the state, district. There should be no Save button
4	Type in something for State OR District text field	Save button should become visible
5	Enter some value for State and leave the District field blank and click the Save button	An error message "tenant.district.required" should show up. The data should not get saved

Smarter Balanced RFP#11/Program Management

Program Management/Add a Tenant

6	Enter some value for State and leave the District field blank and click the Save button	An error message "tenant.state.required" should show up. The data should not get saved
7	Enter some value in State field to enable the Save button and then delete the same leaving the State and District fields blank. Click the Save button	An error message "tenant.state.required:", "tenant.district.required" should show up. The data should not get saved
8	Repeat steps 5 -7 using POST from REST client. URL (http://localhost:8080/pmi/rest/tenant) And use payload { "state" : "Wisconsin", "district" : "North-East" } Remove corresponding values from payload to achieve particular case like for not providing State, leave state as blank	Error message should show up and the data should not get saved.
E1	validation message tenant.multiple.found	More than one result found for name {0}
E2	validation message tenant.invalid.id	Update Tenant failed, invalid id.
